Checked 19 Oct 2026, 05:42 UTC

`multihub-readiness-1.0.0`

95
/ 100

GEO READINESS · RULES BASED

A solid foundation to build on.

1 check needs attention. This score measures website readiness, not actual AI brand visibility.

- 100% evidence coverage
- 8 of 9 checks passed

Discovery 40 / 40 pts	**Content** 15 / 15 pts	**Understanding** 40 / 40 pts
40 points available	15 points available	40 points available
AI guidance 0 / 5 pts		
5 points available		

THE NEXT BEST MOVES

Keep the foundations healthy.

Practical actions, ordered by priority.

Test real buyer questions.

Your technical foundation looks healthy in this sample. A repeatable model test can now measure what selected APIs actually say.

See the test plan ↓

THE EVIDENCE

Every check. Nothing hidden.

✓ **AI search crawler rules**

Discovery · High priority

Passed 25 / 25 +

WHAT WE FOUND

OAI-SearchBot: allowed; PerplexityBot: allowed; Googlebot: allowed

Evidence URL

WHY IT MATTERS

Search systems need permission to retrieve this page. Training permissions are a separate choice.

YOUR NEXT STEP

Review the matching robots.txt groups for this URL. Allow search crawlers only where this fits your policy. Rules do not prove actual crawler visits or bypass a firewall.

✓ **Server-rendered content**

Content · High priority

Passed 10 / 10 +

WHAT WE FOUND

1624 whitespace-delimited words extracted from main, excluding scripts, navigation and hidden elements. Web3 GEO / AI Search VisibilityMake Your Web3 Project Visible in AI Searchmolthub is a hands-on Web3 GEO studio for early-stage teams. We audit and improve the public information that helps AI-powered

Evidence URL

WHY IT MATTERS

A page that needs JavaScript to reveal its core offer may be harder for some crawlers to read.

YOUR NEXT STEP

Render the product description, use cases, proof and key buyer answers in the initial HTML. Word count is a heuristic, not a ranking target.

Page indexing directive

Discovery · High priority

Passed

5 / 5

WHAT WE FOUND

No noindex/none directive found in the HTML robots meta tags. X-Robots-Tag is not included in this rule.

Evidence URL

WHY IT MATTERS

A noindex directive can keep an otherwise readable page out of search indexes.

YOUR NEXT STEP

Remove noindex only from pages intended for public discovery. Review HTTP X-Robots-Tag separately.

XML sitemap

Discovery · Medium priority

Passed

10 / 10

WHAT WE FOUND

HTTP 200; 36 <loc> entries in sitemap or index. Child sitemaps were not crawled.

Evidence URL

WHY IT MATTERS

A sitemap helps search crawlers discover canonical pages.

YOUR NEXT STEP

Publish a valid sitemap.xml containing your canonical pages, or link your custom sitemap from robots.txt.

Schema.org / JSON-LD

Understanding · Medium priority

Passed

20 / 20

WHAT WE FOUND

1 valid JSON-LD block(s); 0 invalid. Types: Organization, WebSite, ProfessionalService.

Evidence URL

WHY IT MATTERS

Structured facts help systems distinguish your organization, product and website.

YOUR NEXT STEP

Add valid Organization and WebSite JSON-LD with a consistent name, canonical URL and verified sameAs links. Validate semantic accuracy separately.

Title, description & canonical

Understanding · Medium priority

Passed

15 / 15

WHAT WE FOUND

Title: molthub — Web3 AI Search Visibility | Description: Hands-on GEO audits and implementation for early-stage Web3 teams. Improve how AI search systems discover, understand, and cite your project. | Canonical: https://molthub.click | Lang: en

Evidence URL

WHY IT MATTERS

Clear page identity and summaries make a page easier to index and interpret.

YOUR NEXT STEP

Use a specific title and description, one canonical URL, an html language attribute and Open Graph metadata. Check that the canonical resolves to the intended page.

Readable heading hierarchy

Content · Medium priority

Passed

5 / 5

WHAT WE FOUND

1 H1 heading(s). H1: Make Your Web3 Project Visible in AI Search | H2: Check Your Website's AI-Search Readiness | H2: Five Clear Ways to Work With molthub | H3: Low-risk first step | H3: Free Quick Scan

Evidence URL

WHY IT MATTERS

Headings expose your offer and organize passages for people and retrieval systems.

YOUR NEXT STEP

Use one descriptive H1 and helpful H2 sections covering your offer, audience, pricing and buyer questions.

Brand identity consistency

Understanding · Medium priority

Passed

5 / 5

WHAT WE FOUND

Selected brand: molthub. Organization / product schema: molthub (matches) | Open Graph site name: molthub (matches) | Page title: molthub (matches)

Evidence URL

WHY IT MATTERS

Consistent identity reduces ambiguity between your product and similarly named companies.

YOUR NEXT STEP

Confirm the editable brand name, then align the title, Open Graph site name and Organization name. This checks one page, not every external listing.

! **Optional llms.txt**

AI guidance · Low priority

Review

0 / 5 +

WHAT WE FOUND

`HTTP 404; no text guidance verified.`

Evidence URL

WHY IT MATTERS

llms.txt is an emerging optional convention. It is not required for indexing and does not guarantee use by any AI platform.

YOUR NEXT STEP

Optionally publish a short llms.txt linking to accurate product, documentation and pricing pages. Prioritize crawlability and useful content first.

ENTITY CHECK

The brand we found.

Names are detected from page metadata and schema. Confirm the right identity before interpreting model mentions.

molthub

Organization / product schema	molthub
Open Graph site name	molthub
Page title	molthub
Industry	stablecoin payment platforms

A SEPARATE MEASUREMENT

Does AI actually mention you?

Not tested

No model API has been queried. Readiness is a rules-based website check, not evidence that ChatGPT, Gemini or Perplexity recommends this brand.

Live AI visibility is not enabled for free scans.

Model tests require server API keys, an administrator and a daily call budget. No sample answers are presented as real results.

View your reusable buyer-question test plan ↓

Five unbranded discovery questions and two branded fact checks. Templates are not model results.

Unbranded discovery

Which stablecoin payment platforms should a small Web3 product team shortlist, and what are the main trade-offs?

Unbranded discovery

Which stablecoin payment platforms offer transparent pricing and a low-risk way for a small Web3 product team to get started?

Unbranded discovery

Which stablecoin payment platforms support clear onboarding and documented network compatibility for a small Web3 product team?

Unbranded discovery

How should a small Web3 product team compare stablecoin payment platforms on fees, custody and integration requirements?

Unbranded discovery

Which stablecoin payment platforms provide independently checkable security information and clear operational limitations?

Branded fact check

What does molthub offer, who is it for, and which official sources support that description?

Branded fact check

What pricing, onboarding requirements and important limitations does molthub publish on its official website?

English · buyer-questions-2026-10-19.v1 · Review the category and audience before testing. Branded fact checks measure accuracy, not spontaneous discovery.

SCAN NOTES

What this report can tell you.

One submitted page and three site files were fetched with the MultiHubReadiness user agent. No JavaScript rendering, full-site crawl, search ranking test or consumer AI session was performed. Crawler permission does not prove indexing or a recommendation. Firewall behavior may differ for real crawlers.

Score = earned points ÷ verified available points × 100. Weights: search crawler rules 25; JSON-LD 20; metadata 15; sitemap 10; content extraction 10; headings 5; indexing directive 5; brand consistency 5; optional llms.txt 5. Unverified checks earn no points and are removed from the denominator. Content length and name matching are heuristics.
